Exposure:

Academic Projects:

TITLE: Music Recommendation System based on Speech and Facial Expressions

DESCRIPTION:

Emotion-based music recommendation is the process of discerning and interpreting human emotions through facial expressions and speech recognition to curate personalized music playlists. The objective is to develop systems capable of comprehending, interpreting, and responding to emotional cues in order to deliver fitting music selections. This field holds significant promise with diverse applications, including enhancing mood regulation, therapeutic interventions, immersive entertainment experiences, and personalized user engagement in streaming platforms. The process of emotion-based music recommendation involves gathering and analyzing data, primarily focused on facial expressions.

TITLE: Movie Ticket Booking Website System

DESCRIPTION:

The project objective is to book cinema tickets online. The Ticket Reservation System is an Internet based application that can be accessed throughout the Net and can be accessed by anyone who has a net connection. This application will reserve the tickets.

TITLE: Fraud Insurance Claim Detection**DESCRIPTION:**

Developed a robust and efficient system for the early detection of fraudulent insurance claim.
